Dear Friend:—

March 1, 1929

It pays to use good seed. There is no question about that. But how to know which of all the seeds offered really are good seeds is a question. By good seed we mean not only clean, pure seed that will grow but also seed of varieties or strains that will pay best under our conditions.

Our State Experiment Stations can give us the only reliable answer to that question. Every year they conduct scores of tests in different localities. Inferior strains are dropped, the better ones continued and new strains from all over the world are thoroly tested. Moreover they are continually developing better strains.

At Quaker Hill Farm we specialize in seeds of strains that have been proved superior and are recommended for the North Eastern States by Experiment Stations and Farm Bureaus. So far as possible we have our seed crops and the seed inspected by the College or Station of the State where grown and if they meet the high standards of the official certifying body of that State, they are certified and guaranteed under their rules. This gives further assurance of quality.

Following are brief descriptions of our offerings for 1929. It will pay you to use these strains just as you would do if you had made the tests yourself.
